

The Future Envelope 12

& FACEcamp Results Seminar

Conference on Building Envelopes
20-21 May 2019, NOI Techpark, Bolzano (Italy)

It's all about performances.

New design tool and approaches, and innovative construction methods are enabling architects and engineers to conceive and develop increasingly complex and daring building envelopes. This process is rapidly reshaping our built environment, and transforming the concept of building envelope itself, which is no longer a passive and static element that only separates the indoor environment from the outdoor world.

In this fast changing context, one of the major issues is the evaluation of the performances of such complex façade systems. The different functions of a complex building envelope have their respective requirements, and hence designers have to analyze and ensure the performances of overall faced system.

On 20th May FACEcamp Results Seminar will set the basis for the The Future Envelope 12 Conference

FACEcamp is funded by European Regional Development Fund and Interreg V-A Italy-Austria 2014-2020.
