

Additive Manufacturing: opportunities and perspectives for businesses

FRIULI INNOVAZIONE - MARCH 29, 2019
8.30 AM – 4.30 PM

Additive FVG Square is the first additive square in Italy, where public and private sectors meet to accelerate the transformation of companies in terms of Industry 4.0. Since its birth, in October 2018, the interest in additive technologies and their potentialities for businesses is constantly growing, on the regional territory but not only. For this reason it is necessary to invest more resources in this project, offering to other companies the possibility to understand how to transform the use of additive production into value. The meeting will also represent the occasion to collect possible expression of interest from companies willing to start a collective training in the context of Additive FVG Square.

Morning session Sala Convegni – A building

- | | |
|----------|--|
| 8.30 AM | EOS, Germany <i>Recent Breakthroughs in Additive Manufacturing</i> |
| 9.30 AM | Coffee break |
